Citizenship: Russia

Education:
Tyumen State University, Tyumen, Russia
2012 yr.

Skills:
Languages
Russian — Native
English — C1 — Advanced
Polish — B2 or C1
Spanish — B1 — Intermediate

About me:

Studied at "Applied Informatics in Economics" for one year after school, after that programming and IT became my hobby for 15 years and to this day.

Since 2006 I have been constantly using various Linux distributions. I install FreeBSD.

I build the system kernel. I configure network security settings. I build the hardware myself.

Since 2005 I have learned Turbo Pascal, C, C++, Nasm assembler.

I also studied Perl, JS, Java.

I know the following IDEs - Eclipse, Delphi, Lazarus, Code::Blocks, Geany.

For the Flash shell, I learned the Action Script 2 and Action Script 3 languages.

Recently, I also learned Python 3.

I mastered the dd, gcc, make utilities (Creating a makefile - describing targets, abstract targets, commands for compiling and displaying text, creating directories).

Configuring the Grub bootloader, including for loading FreeBSD.

Sep 2023 - studied satellite protocols (public version).

Sep 2024 - studied the Yocto system (poky, embedded linux) - a system for assembling embedded Linux OS, creating layers in the system, setting program sources in a variable for assembly.

December 2024 - mastering the QA manual (manual testing), the program included the qase.io website, the jiro program, technical parameters and features of different types of testing.

Ready to consider any IT vacancy at any level.

I am open to new technologies and ready to quickly and efficiently learn any language and IDE convenient for you.
